

SHAHID ALI

FULL STACK DEVELOPER

+91-8799705329 | New Delhi | bizz.shahid@gmail.com | [Portfolio Website](#) | [LinkedIn](#) | [Github](#)

Full Stack Developer with 1+ year of production experience shipping React 18 and Node.js applications across SaaS platforms and client-facing products. Skilled in building RBAC-secured backends with PostgreSQL and Supabase, preventing data integrity issues through database-level constraints, and synchronizing real-time data using TanStack Query. Delivered a live EdTech marketplace serving 50+ tutors globally and a SaaS queue management platform for clinic and business operations. Strong grounding in DSA and system design principles, leveraging AI-assisted tools to accelerate delivery without compromising code quality.

AREA OF EXPERTISE

Frontend : React 18, Next.js, React Native, TypeScript, Zustand, Redux, TanStack Query, Tailwind CSS

Backend: Node.js, Express.js, REST API Design, JWT Authentication, RBAC, PostgreSQL, MongoDB, Supabase, Firebase

Core CS: Data Structures & Algorithms, System Design Fundamentals, Database Optimization , Computer Networks

Tools : Git, GitHub, Figma, NPM, Postman

PROFESSIONAL EXPERIENCE

Full Stack Developer | **SELECTRONIC EQUIPMENT CRICONET**

FEB 2025 - MAR 2026

- Engineered a dynamic product catalog with advanced filtering, sorting, and TanStack Query-powered pagination caching, reducing redundant API calls and improving browse performance across the platform.
- Built fully functional cart and wishlist features with persistent state management using Zustand, delivering a smooth and uninterrupted shopping experience across user sessions.
- Developed complete user authentication — signup, login, and protected routes — backed by PostgreSQL database policies to enforce role-based access control and secure sensitive user data.
- Owned and shipped the complete e-commerce feature set across the full stack, contributing to a 15% increase in user retention and measurable improvement in conversion rates.

PROJECTS

QueueSage (Lineless) — SaaS Queue Management Platform Live

Built a production-ready SaaS platform digitizing physical queue management for clinics and businesses, replacing manual token systems with a real-time digital counter and appointment infrastructure.

- Engineered a live organization dashboard using TanStack Query for real-time queue synchronization — displaying counter status, live capacity, and usage percentages without manual refresh across multiple concurrent counters.
- Built a Master Visitor Registry with advanced search and multi-status filtering (Waiting, Serving, Completed), giving staff a unified view of all visitors across every active queue simultaneously.
- Developed a robust appointment booking system with custom PostgreSQL SQL constraints to prevent double-booking at the database level — ensuring data integrity independent of application-layer validation; leveraged AI-assisted development tools to accelerate schema design and constraint logic iteration.

Tutor Job Portal — Malaysian EdTech Platform Live

Built and shipped a full-stack multivendor platform for a Malaysian startup, currently serving 50+ approved tutors globally, connecting them with students for scheduling, assignments, and exam paper management.

- Engineered complex relational data mapping across multiple linked tables — pulling Tutor and Student IDs from an Assignment table, resolving their profiles from separate user tables, and mapping everything to scheduled time slots, enabling accurate session tracking across a multivendor system.
- Built a grid-based calendar from scratch handling dynamic event mapping, multi-booking indicators with popup overflow, and automatic day-of-week calculation from user-selected dates — eliminating manual data entry errors.

EDUCATION

Master of Computer Applications (MCA)

Jun 2023 - Jun 2025

Indira Gandhi National Open University

- Specialized in Full Stack Web Development and Software Engineering

Bachelor of Computer Applications (BCA)

June 2019 - Aug 2022

Guru Gobind Singh Indraprastha University
